

NSF-PATH Housing Research Agenda

Volume 2 Position Papers

Principal Investigators:

M.G. "Matt" Syal, Michigan State University
Makarand Hastak, Purdue University
Michael A. Mullens, University of Central Florida

Advisory Committee Members:

P.N. Balaguru, NSF-PATH
Eric Burnett, Pennsylvania State University
Dana Bres, HUD-PATH
Steven Cramer, University of Wisconsin
Theodore Koebel, Virginia Polytechnic and State University
Carlos Martin, Arizona State University / HUD-PATH
Michael O'Brien, Virginia Polytechnic and State University

Sponsoring Organizations:

National Science Foundation (CMS-0332404)
HUD - Partnership for Advancing Technology in Housing
National Consortium of Housing Research Centers
University of Central Florida
Purdue University
Michigan State University

TABLE OF CONTENTS

Preface	vi
----------------------	----

FOCUS GROUP I: CONSTRUCTION MANAGMENT AND PRODUCTION

Production Flow and Shop Floor Control: Structuring the Modular Factory for Custom Homebuilding	1
<i>Michael A. Mullens, University of Central Florida</i>	
Building Process Optimization with Supply Chain Management in the Manufactured Housing Industry	13
<i>Makarand Hastak and Matt Syal, Purdue University and Michigan State University</i>	
Skill-driven Optimization of the Housing Industry	19
<i>Avi Wiesel, Arizona State University</i>	
The On-site Housing Factory: Quantifying its Characteristics.....	27
<i>Howard H. Bashford, Arizona State University</i>	
The Leadership/Management Growth Model: Dynamic Framework for Understanding Construction Management and Production in the Housing Industry.....	34
<i>Jack H. Willenbrock, JHW:C/M Consultants</i>	
Waste Management at the Construction Site	45
<i>Joseph Laquatra, Cornell University</i>	
Web-Based Synchronous Communication in Construction: Breaking Out of Zero-Sum Game	51
<i>Leonhard E. Bernold, North Carolina State University</i>	
An Open Building Approach to Residential Construction: A Strategy for Balancing Efficiency and Variety in Construction Management and Production	60
<i>Stephen Kendall, Ball State University</i>	
Lean Production Paradigms in the Housing Industry	72
<i>Tariq Abdelhamid, Michigan State University</i>	

FOCUS GROUP II: STRUCTURAL DESIGN AND MATERIALS

Fire Resistant Design in Housing - Status and Opportunities.....	82
<i>Steven M. Cramer and Robert H.White, University of Wisconsin-Madison</i>	

Use of Innovative Connectors and New Combination of Materials to Address Weakness in Light-Frame Construction.....	94
<i>J. Daniel Dolan, Don Ohanehi, and David Dillard, Washington State University and Virginia Tech</i>	
Supplemental Damping in Wood frame Structures	102
<i>David W. Dinehart, Villanova University</i>	
Fiber-Cement Composites for Housing Construction: State-of-the-Art Review.....	112
<i>B.J. Mohr, N.H. El-Ashkar, and K.E. Kurtis, Georgia Tech</i>	
Biobased Structural Composite Materials for Housing and Infrastructure Applications: Opportunities and Challenges	129
<i>L.T.Drzal, A.K.Mobanty, R. Burgueno, and M. Misra, Michigan State University</i>	
Application of Traditional Materials in Non-traditional Ways for Improved Housing Construction.....	141
<i>Mervyn J. Kowalsky and Gavin D. Wight, North Carolina State University</i>	
Moment Resistant Connections in Prefabricated Wood Frame Construction	153
<i>Robert N. Emerson, Oklahoma State University</i>	
FRP-Reinforced Oriented Strand Board Panels in Wood-Framed Shear Wall Construction.....	162
<i>William G. Davis, Habib J. Dagher, Eric D. Cassidy, Keith Martin, and Douglas Gardner, University of Maine</i>	

FOCUS GROUP III: BUILDING ENCLOSURES, ENERGY AND IAQ

Ventilation Drying in Enclosure Wall Systems	172
<i>Eric Burnett, Penn State University</i>	
Structural Insulated Panels - Sustainable Design Incorporating Impact on Indoor Air Quality.....	178
<i>J.C. Little and A.T. Hodgson, Virginia Tech and Lawrence Berkeley National Laboratory</i>	
Energy Efficient and Sustainable Building Enclosures Using Bio-Based Materials.....	187
<i>K. Chandrashekhara, University of Missouri-Rolla</i>	
Hygrothermal Performance of Basement Foundation Systems	192
<i>Patrick H. Huelman and Marilou Cheple, University of Minnesota</i>	
Preservative-Treated Structural Wood Composites for Durable Home Construction.....	200
<i>Qinglin Wu, Louisiana State University Agricultural Center</i>	

Opportunities for Improving Overall Building Performance through the Selection of Natural Hazard Resistant Attributes for Building Enclosure Materials.....	209
<i>Rosemarie Geier Grant, Sate Farm Insurance Companies</i>	

Alleviation Moisture Problems Hot, Humid Climate Housing.....	216
<i>Subrato Chandra, Neil Moyer, Danny Parket, David Beal, Dave Chasar, Janet McIlvan, Eric Martin, Florida Solar Energy Center</i>	

Extruded Fiber-Reinforced Composites for Building Enclosures	222
<i>Katherine G. Kuder, Bin Mu, Michele F. Cyr, Surendra P. Shah, Northwestern University</i>	

FOCUS GROUP IV: HOUSING TECHNOLOGY, COMMUNITY AND ECONOMY

Residential Construction Diffusion Research for the NSF-PATH Program.....	232
<i>C. Theodore Koebel, Virginia Tech</i>	

Arizona Partnership for Housing Innovation.....	235
<i>Anil Sawhney, Arizona State University</i>	

Consumer Acceptance of Universal Design: A review and Suggestions for Future Research.....	241
<i>Anne L. Sweaney, Teresa L. Nunn, Stephanie E. Vanderford, University of Georgia</i>	

Retrofit, Rehab, and Maintenance.....	247
<i>David Listokin, Rutgers University</i>	

Improved New Concept Screening as a Means to Accelerate Construction Technology Diffusion for the NSF-PATH Program.....	256
<i>Ed Hudson, NAHB Research Center</i>	

Promoting Best Design and Product Selection Practices in Florida's Residential Construction Industry.....	259
<i>Pierce Jones, University of Florida</i>	

What are the Potential Effects of Technology in Affordable Housing Construction on the Development of Social Capital by Community-Based Development Organizations	266
<i>Rex L. LaMore, Michigan State University</i>	

The Built Environment and Public Health.....	274
<i>R.D. von Berunth, Michigan State University</i>	

Healthy Homes Research Agenda.....	278
<i>James Bohland and Ted Koebel, Virginia Tech</i>	

Health and the Built Environment: Drawing Parallels and Inspiration from the New Integrative Medical Model.....	282
<i>Joanne M. Westphal, Michigan State University</i>	

FOCUS GROUP V: SYSTEMS INTERACTIONS AND WHOLE HOUSE APPROACH

A Preliminary Method for Evaluating Physical Design Characteristics and Whole House Performance Scoring.....	290
<i>Michael O'Brien and Ron Wakefield, Virginia Polytechnic Institute & State University</i>	

Automated Construction by Contour Crafting.....	299
<i>Behrokh Khoshnevis, University of Southern California</i>	

A Building Moisture Load Theory for Improvement of Whole House Durability	309
<i>Charles W. Graham, Texas A&M University</i>	

Advancing Housing Technology	319
<i>Steven Van Dessel and Achille Messac, Rensselaer Polytechnic Institute</i>	

Bio-Based Composite Materials for Whole House Design: Potential Application and Research Needs	327
<i>Harry W. Shenton III and Richard P. Wool, University of Delaware</i>	

Whole House Production: Integration of Factory-Built and Site-Built Construction.....	334
<i>Matt Syal and Makarand Hastak, Michigan State University and Purdue University</i>	

Whole House Design through the Application of Multi-Functional Precast Panels.....	343
<i>Michael W. Ellis and Yvan J. Beliveau, Virginia Tech</i>	

Industrializing Processes for Affordable Disaster Proof Housing	349
<i>Yvan J. Beliveau, Virginia Tech</i>	

Author Index	355
---------------------------	------------

PREFACE

On behalf of my co-principal investigators, advisory committee members and participants of the NSF-PATH Housing Research Agenda project, we are pleased to present the final report. Volume 2 contains position papers submitted by 45 housing researchers nationwide and Volume 1 consists of the deliberations, summary and recommendations of the research agenda development including the workshop held at University of Central Florida in February 2004.

The need for a well defined housing research agenda was recognized since the creation of the Partnership for Advancing Technology in Housing (PATH) program in 1998. The PATH program initiated a number of research road mapping exercises that focused on developing applied research. In 2000, the National Science Foundation's (NSF) Directorate of Engineering through its Civil and Mechanical Systems division launched the housing research program in conjunction with PATH. The NSF's housing research program led to a very positive response by a number of researchers at several major universities. After offering the NSF-PATH program for three years, it was felt that there was a vital need to define the basic/development research agenda in order to successfully continue or possibly, expand the program. As a result, this research agenda project was awarded.

This report represents research ideas, workshop deliberations and recommendations categorized in five focus areas – (1) Construction Management and Production; (2) Structural Design and Materials; (3) Building Enclosures, Energy, and Indoor Air Quality (IAQ); (4) Housing Technology, Community and the Economy; and (5) Systems Interactions and “Whole House” Approach. I would like to thank the focus area leaders and other members of the advisory committee for their hard work and input. I would also like to acknowledge funding by NSF (CMS-0332404) and Michigan State University. In addition, I am thankful to HUD-PATH and the University of Central Florida for their help with the workshop organization and to HUD-PATH and Purdue University for their assistance with the production of the final report.

Matt Syal
Principal Investigator
Michigan State University

June 2004
